RE: Amendment #1 to the 2007 – 2012 Forest Stewardship Plan, TFL 58, FL A16870, TL T0184, TL T0253

Dear Len Munt:

I am submitting the following amendment to the above referenced forest stewardship plan under FRPA Sec. 16. I have determined that the proposed amendment materially changes the intended results or strategies specified in the plan and is not eligible for declaration under FRPA Sec. 20(1).

Teal Cedar Products Ltd. has entered into a contract with Island Alder for the intermediate harvesting of alder volume from 2nd growth stands. This amendment is required to establish stocking standards for these intermediate entries. The following section is added:

8.4.1 Stocking Standards for Intermediate Cutting of Alder

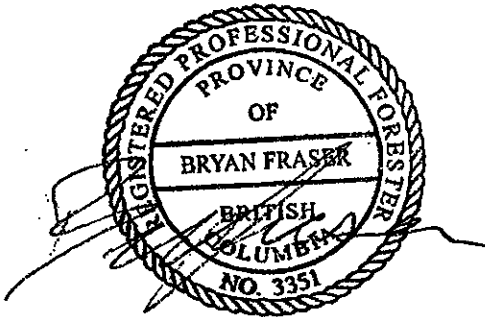

For the purpose of FPPR section 16(4), when harvesting timber in all FDU's for the reasons referred to in FPPR section 44(3)(h) and (i), the following stocking standards will apply where a partial cutting silvicultural system is prescribed for the purpose of harvesting alder in 2nd growth stands:

1. The basal area retained for each conifer species, calculated for the entire cutblock, will be 90% or greater of the pre-harvest basal area for that conifer species.

2. Where the basal area retained for all species within any area 0.1 ha or greater is less than 30% of the pre-harvest basal area for that area, that area will be prescribed as a separate standards unit subject to even-aged stocking standards.
3. Trees damaged by harvesting operations will not contribute to the basal area calculations described above. Damaged trees shall be any trees having scars greater than 400 cm² or any trees having broken tops below a 10 cm d.i.b. All merchantable damaged trees will be harvested.

Should you have any questions or concerns please feel free to contact me at (250) 637-5323 ext. 6 or via email at bfraser@tealjones.com.

Sincerely,
Teal Cedar Products Ltd.
